Notes from conference call among Jon Peterson and Westin
Re: assumptions for cost analysis of O&M activities

July 30, 1998

- 1) The text of the O&M plan states that they will run TCL/TAL analysis, however the tables indicate that they plan to run the SW 846 method. The TCI all/TEL analysis is more expensive and also more accurate and we will probably work for the date conduct this type of analysis for monitor instead of the S. W. 846 method. The cost is approximately 50 percent more for the TCI low/TEL analysis consequently we will assume that they will be required to run TCL/TAL analysis.
- 2) The contractor asked whether not include cost for oversight of vehicle and activities. I told them no, as generally would have the State do site oversight activities therefore we're not including oversight cost in this analysis.
- 3) Assume that monitoring will proceed for 30 years - This is a standard assumption at all landfills.
- 4) The O&M plan states that during the 5th year, you would monitor the same 17 monitoring wells as you do for the annual monitoring. This would result in 2 separate groundwtaer monitoring events for the 5 year review. This does not seem to make sense, so I told them not to include an extra round of monitoring in the 5th year.
- 5) What is the size of the site - 18 acres.
